First Aid Product Innovation from SETON
Solutions for a Safe, Secure Workplace

Our latest innovative products to market are a range of first aid stations. After listening to customers, we discovered a number of challenges they face when selecting, installing and maintaining first aid solutions. We are proud to introduce our innovative first aid station range to address these issues.

Paul Ingleby
Director of Innovation

This is what customers told us…

Issue:	Risk:	Solution:
Not clear what first aid products are required by law	• Non-compliance	Choice of several station kits with the mandatory first aid components to suit your size and type of business and achieve quick and easy compliance
Difficult to keep track of what has been used and needs replenishing	• Non-compliance • People safety • Liability	The stations allow instant identification of items missing with hi-vis yellow warning indicators and relevant re-order information – making it really easy to replenish stock
Low level of knowledge during an emergency incident	• People safety	The stations contain guidance on basic steps of how to deal with an incident, contact details and legislation guidance
Challenging to keep first aid consumables in one place – tidy and protected and ready for use	• People safety	The stations neatly hold and protect critical first aid items and are also very prominent – making it clear to find them in an emergency

The table below should help an employer assess the risk and therefore the appropriate number of first aid personnel required

Type of Work Environment	No. of Employees	Type of kit required
Lower risk environments such as offices, shops, libraries	1-24 25+	Low Hazard High Hazard
Higher risk environments such as factories, warehouses, construction Sites	1-4 5+	Low Hazard High Hazard

Note: The above information is provided as a guide only – customers are advised to perform a risk assessment of their own premises to correctly assess the needs for their specific environment

Keep your first aid solutions visible, accessible and safe

Convenient location to store accident book

Header sign makes station visible from all angles

Mirror makes it easy to apply eyewash instantly

High visibility panels show when products are missing

Helpful eyewash usage guidelines are easy to understand

Adequate saline for recommended 20 minute flushing period

Neutralising eyewash - quickly neutralises acids and alkalis

Helpful guidance on how to fill out an accident form and comply with the Data protection Act
